- First collaborative store in Brasília, innovating the market and with a high growth rate in this area, promoting the business with television interviews and university articles, resulting in the development of a manual for the collaborative store market in the country.
- Strategic and commercial relationships with suppliers and brands resulting in a 40% increase in customers.
- Managed and motivated 170 brands in this period, maximizing their indicators and making the store a stepping stone to their success.

COVER LETTER

Dear recruiting team,

I'm interested in the position because I believe I can contribute positively to the team, being a graduate student in Information Systems in the 3rd semester (module), certified as a computer technician and with +2 years of experience in web programming / Front-End in HTML, CSS, Javascript, React, Angular, Nodejs, Express, MongoDB, MySQL and with growing learning in React Native, Flutter, PHP; therefore I believe that my skills are aligned with the company's vision and its needs so the opportunity to work together will allow me to improve my technical skills and personal skills with the efficiency desired by the institution.

I've always been connected to technology, for example, when I was in charge of the Do Meu Jeito Collaborative Store in Brasília, I was able to improve my digital knowledge acquired throughout my career by putting them into practice - I was responsible for the IT and Marketing function of the company and performed with the team technical functions such as network structuring, maintenance of computers, printers and networks, in addition to developing the store's website, its social networks and monitoring the development of many campaigns and advertising content assisting the initial implementation of their e-commerce.

From 2019 to early 2021 I was living in Norwich - England, where I improved my assistant skills while working for a large company, Amazon Inc. The experiences I gained from the Collaborative Store and Amazon contributed to my learning and process improvement skills.

I'm currently developing several autonomous projects from designing websites, e-commerce and android / ios applications integrated to the back-end using the most up-to-date and promising tools available on the market.

I am a professional with initiative, creativity, suitable for teamwork and I am looking for an opportunity to put my theoretical knowledge into practice, thus effectively contributing to your expected results. I am available for immediate start and I have availability to work remotely or sponsored visa for moving. I'm motivated to put my skills to collaborate with the company's success.

Thank you for your attention in analyzing my resume and I await further contact.
